

Compose®

HAWORTH®

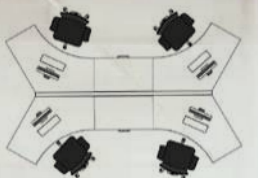

Compose your interiors with an architectural perspective.

The Compose system brings a sense of design integrity to the open plan, adding refinement and clear attention to details. Combining a user focus with tremendous freedom of design, Compose creates flexible work environments perfectly suited to individual tasks.

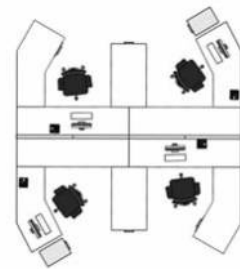

Designed by Studio & Partners in Milan, Italy and Haworth Design Studio, the Compose open plan system provides more design freedom for interiors. With a range of tile options, innovative support solutions, and a clean, cohesive aesthetic, Compose naturally allows greater expression within the workplace.

So, you can Compose precisely the environment you envision.

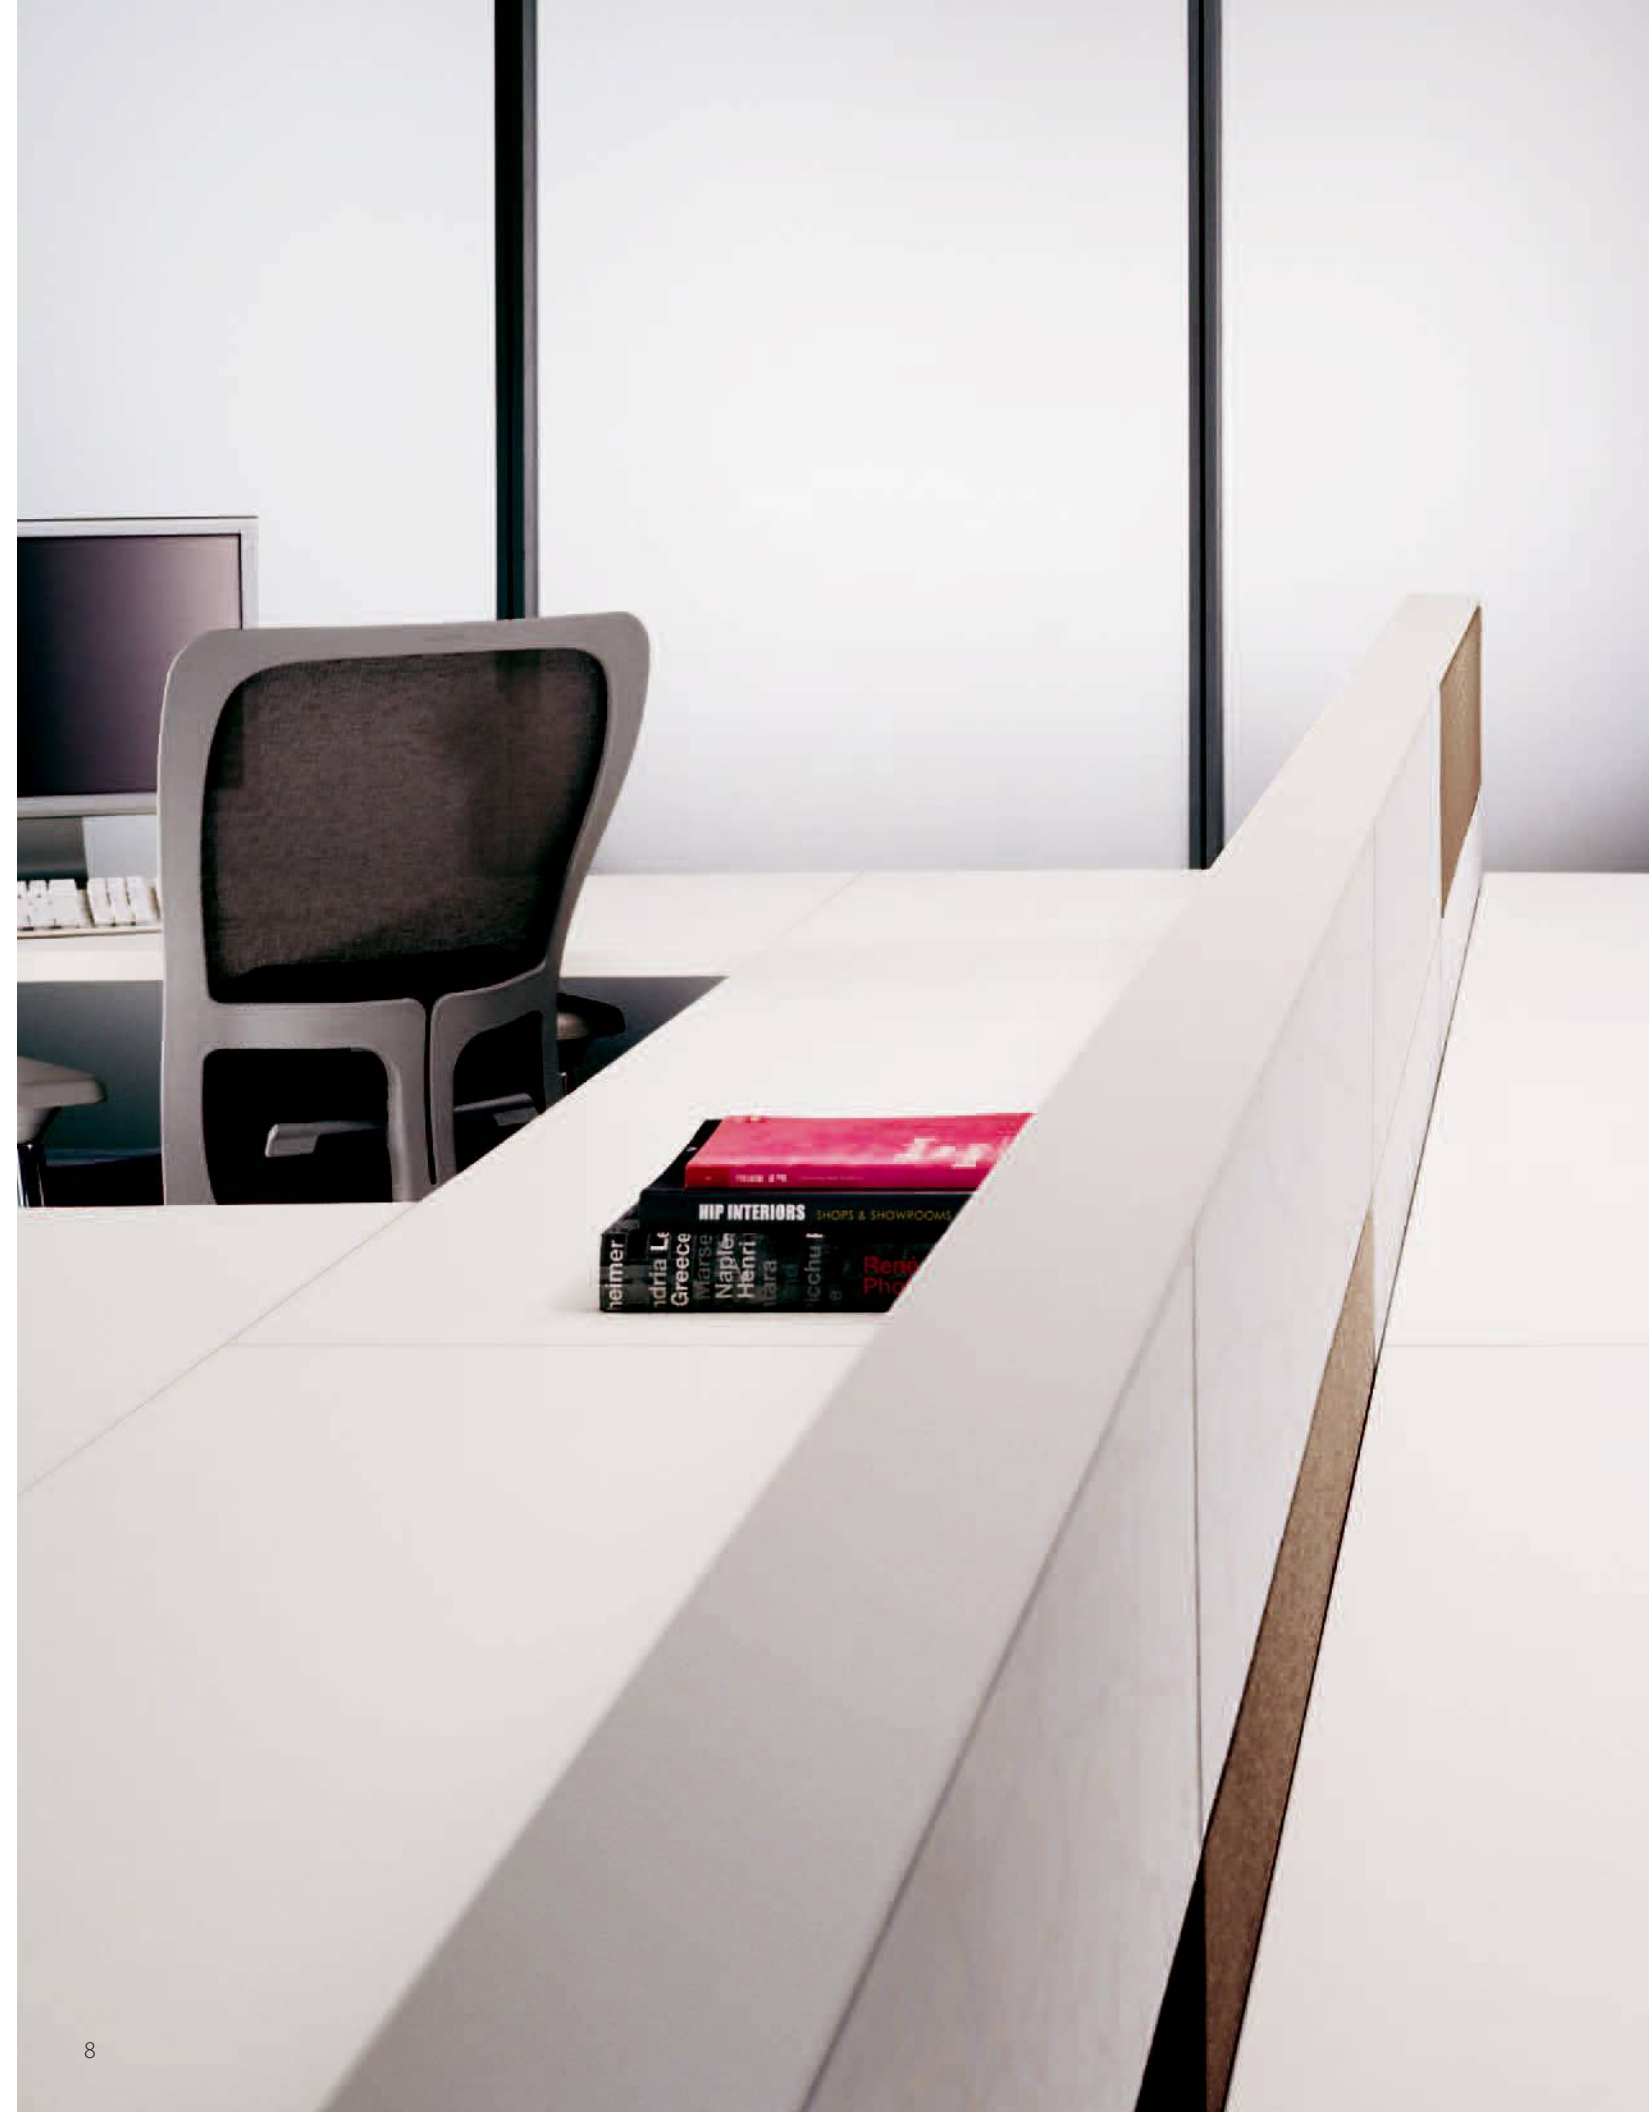

Refined. Accessible. Integrated. A wide variety of design options have been incorporated into Compose—each to enhance the aesthetics, support users’ individual workstyles, and help reflect an organization’s brand and culture.

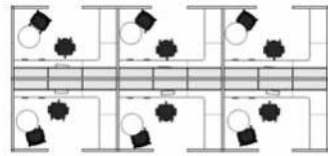

Segmented or monolithic tiles. Continuous top trim across multiple panels. Strict connection reveals and top trim, held firm by steel alignment pins. Compose demonstrates a true appreciation for refined design details.

Choices such as outward-oriented worksurface shapes and glass stack options in a variety of heights support user comfort and simplify team interaction.

Plus, superior engineering is apparent in design innovations such as 16-foot runs without return panels, unbalanced overhead storage, and extruded aluminum trim that remains straight and true, even as workspace reconfigurations occur over time. Intelligent power options provide access at the base, above and below the worksurface, or port power to a custom location on the panel. It’s your choice.

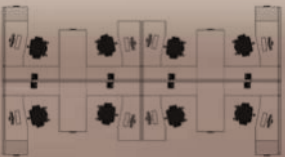

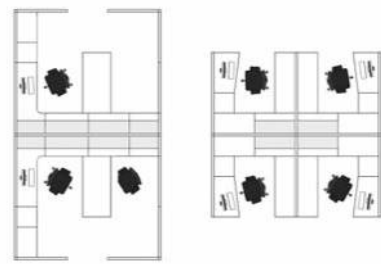

Greater freedom to create. From fabric, laminate, and glass to rich wood veneer, Compose material options express a multitude of personalities and styles, each one clean, crisp, and geometric. Combine materials to create far-reaching possibilities.

Compose glass panel frames allow the balance of privacy with individual views. Low-gloss, double-cut veneers showcase a sophisticated horizontal grain and complement the linear flow of the architecture—and they can be used to effectively communicate status. Important details, such as architectural raceway covers or tiles that extend to the floor give new options for cleaner aisles and office interiors.

What's more, the Haworth Surface Collection lets you choose among sophisticated colors, textures, and patterns. And the enhanced offering from the Haworth+ program includes approved systems fabrics from Carnegie, Luna Textiles, and Maharam, maximizing your choices.

Great alone. Better together.™ Compose is the first system to intentionally integrate with a moveable wall platform. Designed in concert with Enclose® moveable walls, each product complements and enhances the other, culminating in exceptionally unified interiors.

Complementary design details, a common materials offering, and shared components allow you to specify the Compose system and Enclose moveable walls together, for ultimate consistency and efficiency across an entire floorplate.

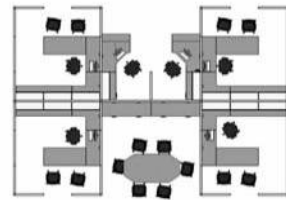

Four-inch-thick Enclose walls integrate seamlessly with three-inch-thick Compose panels, to maintain a proportional scale throughout. What's more, Enclose incorporates the same strict attention to

detail, such as clean reveals, to ensure design continuity extends from wall to panel and tile.

When Compose and Enclose are used together, private offices, collaborative spaces and the open plan become a readily adaptable, cohesive whole. Providing for every level of privacy and hierarchy is simplified without straying from the overarching design intent.

Designed with the environment in mind. With options for superior daylight and views, plus a strong focus on sustainability, Compose can contribute points toward your project's LEED® certification and is GREENGUARD® certified. Nearly 70 percent of Compose components are recyclable—and 100 percent are reconfigurable, helping reduce waste as they adapt to every change.

Throughout its lifecycle, Compose is designed to minimize its impact on the environment and create healthier workspaces. Nearly 70% of its components can be recycled, including all of the aluminum trim and slat tiles. Wood finishes are water based, to minimize the emission of VOC's into the atmosphere. And durable powder coatings don't release the pollutants associated with traditional paints.

But perhaps the most important contribution Compose can make is through adaptability. As a company evolves, Compose can be reconfigured again and again, yet maintain its integrity and durability. The floorplate can be transformed in unlimited ways, as tiles are easily removed, refabricated, and reused. The Compose system reduces waste and increases your return on investment.

Details designed to perform.

Engineered for strength, steel alignment pins ensure consistent, strict reveals on tiles and top trim, for a unified, clean look throughout.

Engineered for beauty, trim remains straight and true even as components are reconfigured time after time.

Pair wood panels with wood trim, full profile aluminum or thin profile steel, with fabric or laminate, or any combination you prefer.

Designed around human dimensions. Panel heights and glass stack frames are deliberately scaled to provide seated and standing privacy, while supporting sightlines and daylight. The result is a new level of sensitivity to end-user satisfaction.

Provide sightlines and views, even while seated. A 24" glass stack can be mounted on a 34" panel, allowing seated daylight and views as well as a sense of privacy.

Thoughtfully scaled panel heights. Designed around human dimensions, Compose can be configured to a 58" height and provide natural standing views as well as seated privacy.

From wood and glass to fabrics and laminates, material choices can be customized for individual users and various levels within the organization.

Interchangeable tiles allow quick-and-easy change outs without disruption.

Standard tackable tiles help users keep work in sight.

Power and data can be accessed above or below the worksurface, at the base or standing height, or ported to custom locations to match individual user needs.

A choice of worksurface supports, including P Leg, adjustable disk base, double leg, Planes single leg, or support panel, extend your design freedom.

Compose benching extends the possibilities of a single system. Use as touchdown stations or to support mobile teams and distributed workers in densely populated areas.

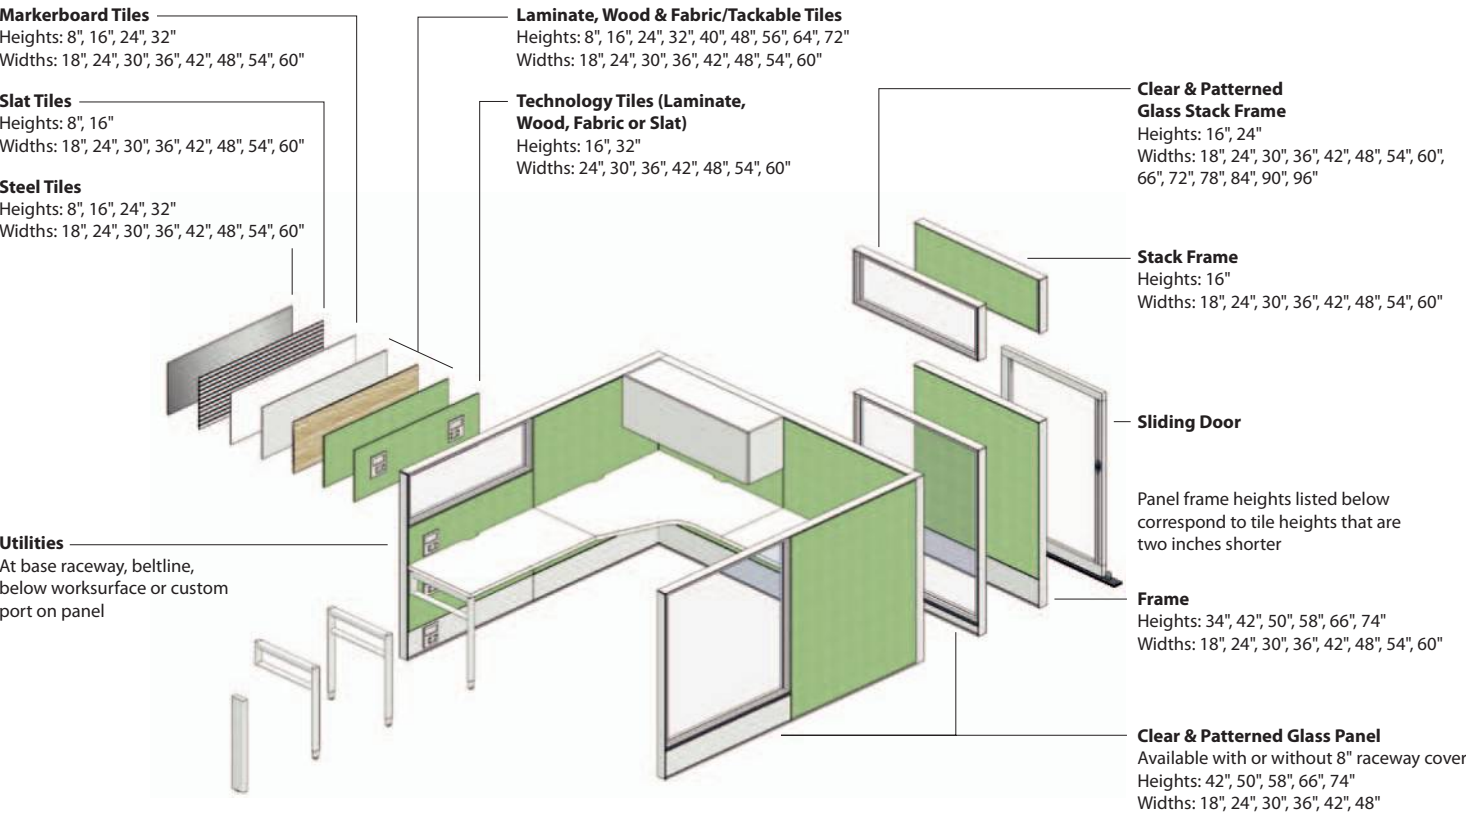

Options such as a light-scale knife edge, wood trim, and a monolithic wood tile, extend planning possibilities—as does seamless integration with other Haworth products, such as the X Series® Active Storage shown here.

Side-independent panel frames allow monolithic tiles on one side and segmented tiles on the other, to balance aesthetic and facility objectives. Add a sliding door to enhance individual privacy.

For a cleaner aesthetic, specify laminate tiles to the floor with no raceway cover. Simple, clean lines without extraneous details support workstyles without distraction.

Compose System

Finishes

Laminate				
Linen H-WL	White Sand H-LC	Platinum H-3P	Putty H-AA
